

git初始化配置

为了更好地方便管理，我们可以在git中添加用户

使用git前需要在命令窗输入

git config --global user.name "username" (不要直接负责粘贴了)

git config --global user.email "email"

输入**git config --list**查看是否输入正常

```
C:\WINDOWS\system32\cmd.exe

C:\Users\Chou>git config --global user.name "whitemo"
C:\Users\Chou>git config --global user.email "whitemozj@outlook.com"
C:\Users\Chou>git config --list
diff.astextplain.textconv=astextplain
filter.lfs.clean=git-lfs clean -- %f
filter.lfs.smudge=git-lfs smudge -- %f
filter.lfs.process=git-lfs filter-process
filter.lfs.required=true
http.sslbackend=openssl
http.sslcainfo=D:/Git/mingw64/ssl/certs/ca-bundle.crt
core.autocrlf=true
core.fscache=true
core.symlinks=false
core.editor="D:\\Notepad++\\notepad++.exe" -multiInst -notabbar -nosession -noPlugin
pull.rebase=false
credential.helper=manager-core
credential.https://dev.azure.com.usehttppath=true
init.defaultbranch=master
user.name=whitemo
user.email=whitemozj@outlook.com

C:\Users\Chou>
```

git config --global color.ui. auto 将git窗口内指令彩色化，便于读取
